DEDP MicroMasters Program
Courses begin May 12

Advance your skills in data analysis, applied economics, and policy design with DEDP courses

The Data, Economics, and Design of Policy (DEDP) MicroMasters program, jointly offered by J-PAL and MIT Open Learning, offers master's level, online courses taught by MIT professors. You can take individual courses to sharpen targeted competencies or complete five courses, including three core requirements and two track-specific electives, to earn the program credential. Those who complete the credential can apply to an accelerated master's degree at MIT or pursue a degree through one of the program's pathway universities or the Alliance for Data, Evaluation, and Policy Training partners.

Want to learn more about whether the program is right for you? Register for our webinar on **Wednesday, April 29 at 9:00 a.m. ET**, where the program team and an MIT alum will answer questions live. All registrants will receive a recording.

New course this term

We're excited to introduce Frontiers of Applied Economics, an advanced elective in the Public Policy Track. Taught by six distinguished MIT faculty—Sara Fisher Ellison, Jonathan Gruber, Parag Pathak, Nina Roussille, Tobias Salz, and Frank Schilbach—this eleven-week course is meant to provide learners with broad exposure to a number of topics spanning public finance, industrial organization, market design, transportation economics, psychology, and labor economics.

It's a unique opportunity for learners to engage with workhorse models and their real-world implications across a diverse range of applied microeconomic applications.

PUBLIC POLICY ELECTIVE

Frontiers of Applied Economics (Advanced)

Taught by Sara Fisher Ellison, Jonathan Gruber, Parag Pathak, Nina Roussille, and J-PAL affiliated professors Tobias Salz and Frank Schilbach
